Keith James Holyoak (born January 16, 1950) is a Canadian-American researcher in cognitive psychology and cognitive science, working on human thinking and reasoning. Holyoak's work focuses on the role of analogy in thinking. His work showed how analogy can be used to enhance learning of new abstract concepts by both children and adults, as well as how reasoning breaks down in cases of brain damage.

The Spider's Thread | The MIT Press

For understanding development of quantitative thinking, the distinction between nonsymbolic and symbolic thinking is fundamental. Nonsymbolic quantitative thinking is present in early infancy, culturally universal, and similar across species. These similarities include the ability to represent and compare numerosities, the representations being noisy and increasing logarithmically with actual ...
