### Skin Anatomy - EnchantedLearning.com

Skin that has four layers of cells is referred to as "thin skin." From deep to superficial, these layers are the stratum basale, stratum spinosum, stratum granulosum, and stratum corneum. Most of the skin can be classified as thin skin. "Thick skin" is found only on the palms of the hands and the soles of the feet.

### 5.1 Layers of the Skin - Anatomy and Physiology

Stratum basale: This bottom layer, which is also known as the basal cell layer, has column-shaped basal cells that divide and push older cells toward the surface of the skin.As the cells move up through the skin, they flatten and eventually die and shed. Stratum spinosum: This layer, which is also known as the squamous cell layer, is the thickest layer of the epidermis.
