Object oriented design is the art of assigning the right responsibilities to the right objects. Responsibility driven design amplifies responsibilities and behavior of objects. It helps us focus on the roles objects play and the responsibilities associated with these roles. Test Driven Development with mock objects does the same thing.

Responsibility Driven Design with Mock Objects

Object-oriented design maps nicely onto the TP application architecture of Figure 3.1 as shown in Figure 3.2.In this style of design, one starts by defining business objects, which are the elementary types of entities used by the business.In programming terms, each business object corresponds to a class in an object-oriented programming language, such as C++, Java, C#, or Visual Basic.
