### Projected state revenues improve in Washington state ...

Years of life lost (YLLs) are years lost due to premature mortality. YLLs are calculated by subtracting the age at death from the longest possible life expectancy for a person at that age. For example, if the longest life expectancy for men in a given country is 75, but a man dies of cancer at 65, this would be 10 years of life lost due to cancer.

Quoting your uncertainty in the units of the original measurement - for example,  $1.2 \pm 0.1$  g or  $3.4 \pm 0.2$  cm - gives the "absolute" uncertainty. In other words, it explicitly tells you the amount by which the original measurement could be incorrect. The relative uncertainty gives the uncertainty as a percentage of the original value.

### How to Calculate Uncertainty | Sciencing

Even science textbooks have to be thrown out every few years because of new information. It seems all that is stable are death, taxes, and  $2+2=4$  (although I've been told this last one is disputed by some mathematicians...). This swaying back and forth between uncertainty and certainty has never stopped.
