ENVIR 280 Natural History of the Puget Sound Region (5) NW Focuses on identification and ecology of defining organisms in major habitats of the Puget Sound region. Geology, climate, and early human history provide a framework for understanding the distribution and development of these habitats.

PROGRAM ON THE ENVIRONMENT

Hence, while the project saw climate change as posing a set of technical questions at the level of the field, the target population viewed climate shocks and stresses as an inseparable moment of a broader political ecology of agricultural production and livelihood dynamics. This led to diverging ideas of what 'resilient' livelihoods entailed.
